RELEVANT EXPERIENCE

JPMorganChase & Co. **Palo Alto, California**

Software Engineer II *Nov 2024 – Present*

- Re-architected DocuSign generation on JPMorgan's Commercial Real Estate platform (DLx) by migrating off an external integration service onto an in-house, team-owned service — retiring a duplicate prefill screen and cutting licensing cost.
- Led a performance initiative on the DLx platform's loan-event pipeline — tuned for large loans carrying 100+ tasks — cutting average processing time by 59.5% (86.4s→35s) via targeted database indexes and eliminating redundant reads and writes per event.
- Replaced nested-loop lookups with map/set-based lookups and batched once-sequential metadata queries into bulk calls for further gains.
- Served as Scrum Master, coordinating engineering, product, and compliance stakeholders to surface and unblock sprint dependencies.

Software Engineer I *Sep 2023 – Nov 2024*

- Served as the firm's primary engineer and point of contact for Sealights, a third-party test-analytics vendor: owned the integration, triaged vendor issues, and supported internal teams adopting it.
- Built a scheduled job on the firm's chaos-engineering platform (Gremlin) that automatically revoked and removed access for users inactive over a year, cutting license costs.
- Co-chaired the new-graduate program for JPMorgan's Palo Alto office, managing a $15,000 annual budget and acting as liaison between incoming hires and senior leadership.

Wells Fargo **San Francisco, California**

Software Engineering Intern *June 2022 – August 2022*

- Acquired ownership of the front-end portion of an internal website, working on adding necessary component features.
- Developed the front-end portion of a brand new chatbot for the website, fetching data from REST APIs to aid Q&A and reducing the time required by 85% for the user to attain information on API releases.

Tillamook **New York, New York**

Project Management Intern *June 2021 – August 2021*

- Conducted 30+ cross-functional interviews among 19 departments in NPD to identify and streamline project processes.
- Collaborated with R&D employees and third-party vendors to establish standardized data and practices in Trial Plans, Reports, and Vendor Briefs.

PERSONAL PROJECTS

Reservations — iOS App & MCP Connector **React Native, TypeScript, Node.js, MCP, OAuth 2.1**

Independent Developer *August 2026 – Present*

- Built an iOS app that unifies travel, dining, and delivery bookings into one timeline.
- Removed a launch blocker — Google's restricted-scope Gmail review — via a custom, standards-based MCP server: the user's own Claude account reads confirmations and forwards only extracted booking fields, removing Gmail OAuth scopes entirely.
- Built server-side validation guardrails for LLM-driven imports instead of trusting model output: bookings are matched by confirmation code, flight number, and title similarity to prevent duplicate re-imports.
- Designed and shipped an OAuth 2.1 authorization server (PKCE, dynamic client registration) with a device-style in-app approval flow and hashed session tokens, letting the connector install in Claude from a single URL.
- Took the product from spec to App Store submission (in review) solo, directing an AI coding agent (Claude Code) for implementation while owning all architecture, security, and product decisions; 290+ automated tests.

LEADERSHIP

Philippine Student Association, Texas A&M University **College Station, Texas**

Historian *2019 – 2020*

- Led a team responsible for planning a $150,000, statewide, collegiate competition with a projected 5,000+ attendees.

EDUCATION

Texas A&M University **College Station, Texas**

Bachelor of Science in Chemical Engineering *December 2022*

SKILLS AND CERTIFICATIONS

Skills: Java, JavaScript, TypeScript, SQL, GraphQL, Kafka, Avro, Python, AWS, Model Context Protocol (MCP), OAuth 2.1, AI-Assisted/Agentic Development (Claude Code), LLM Tool Integration

Certifications: AWS Certified Cloud Practitioner
